

Context

It is important to vary the teaching media when teaching young people with special needs.

Video, when made accessible, allows all young people to acquire new knowledge and skills, to support their motivation and improve their memorization.

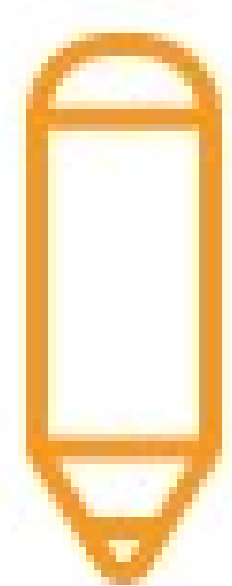

Presentation

Videos can be effective tools to support learning. They can serve students at different levels:

- understanding tool: to visualize a phenomenon, a process, a space, an experience ...
- expression tool: to convey an idea, to develop video editing skills...

The multi-sensory nature of video is attractive to a variety of learners with different skills. Thus, video materials have many advantages: course content is accessible at any time and can be easily reused by learners. These materials are a source of motivation and also allow young people to better appropriate and memorize the learning.

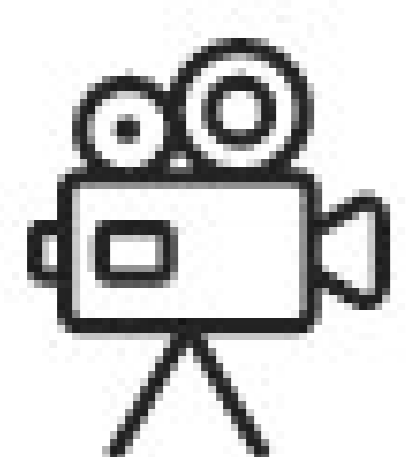

Steps and software for editing a video

Windows movie maker

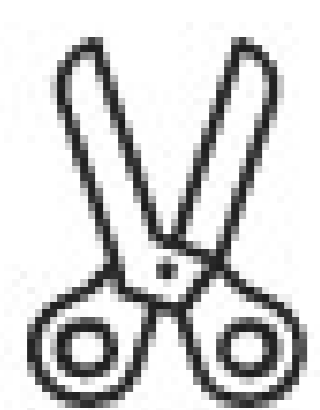

Windows Movie Maker allows you to create, edit, and share your movies quickly and easily via a PC or the Internet through a simple and intuitive interface.

Before editing the video :

- save the different videos/photos/sounds on your computer
- import the videos/photos/sounds into Windows Movie Maker

Edit the video :

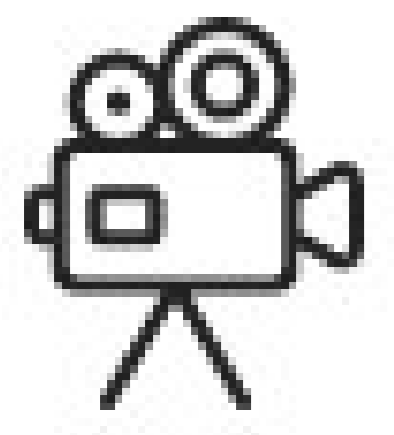

- Once all the videos have been imported, place the different sequences in the editing bar and cut them to your liking. Once your videos have been cut so that they are linked together as you wish, you are left with :
 - Choice of video effects to apply or transitions.
 - Add titles and subtitles.
 - Working with sounds (with the possibility of adding sound and images to be embedded).

Finalize the video :

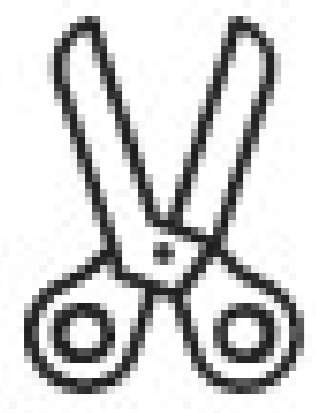

Save and export your video in the desired format (usually mp4).

Imovie

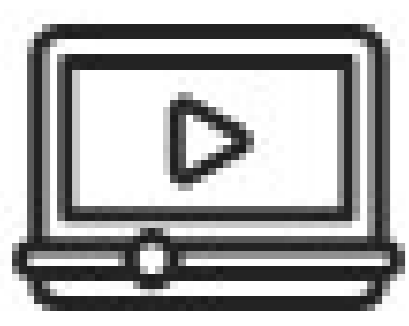

Before editing video :

- Open the Imovie application.
- Enter the name of your project title and select a theme, then click on "Create".
- In the File drop-down list, choose "Import" > "Import movies" to browse the movies and videos on your computer and select the movies you want to modify.

Edit the video :

- Place your videos/photos/sounds in the desired order in the editing bar.
- you can trim your videos and create various transition effects.

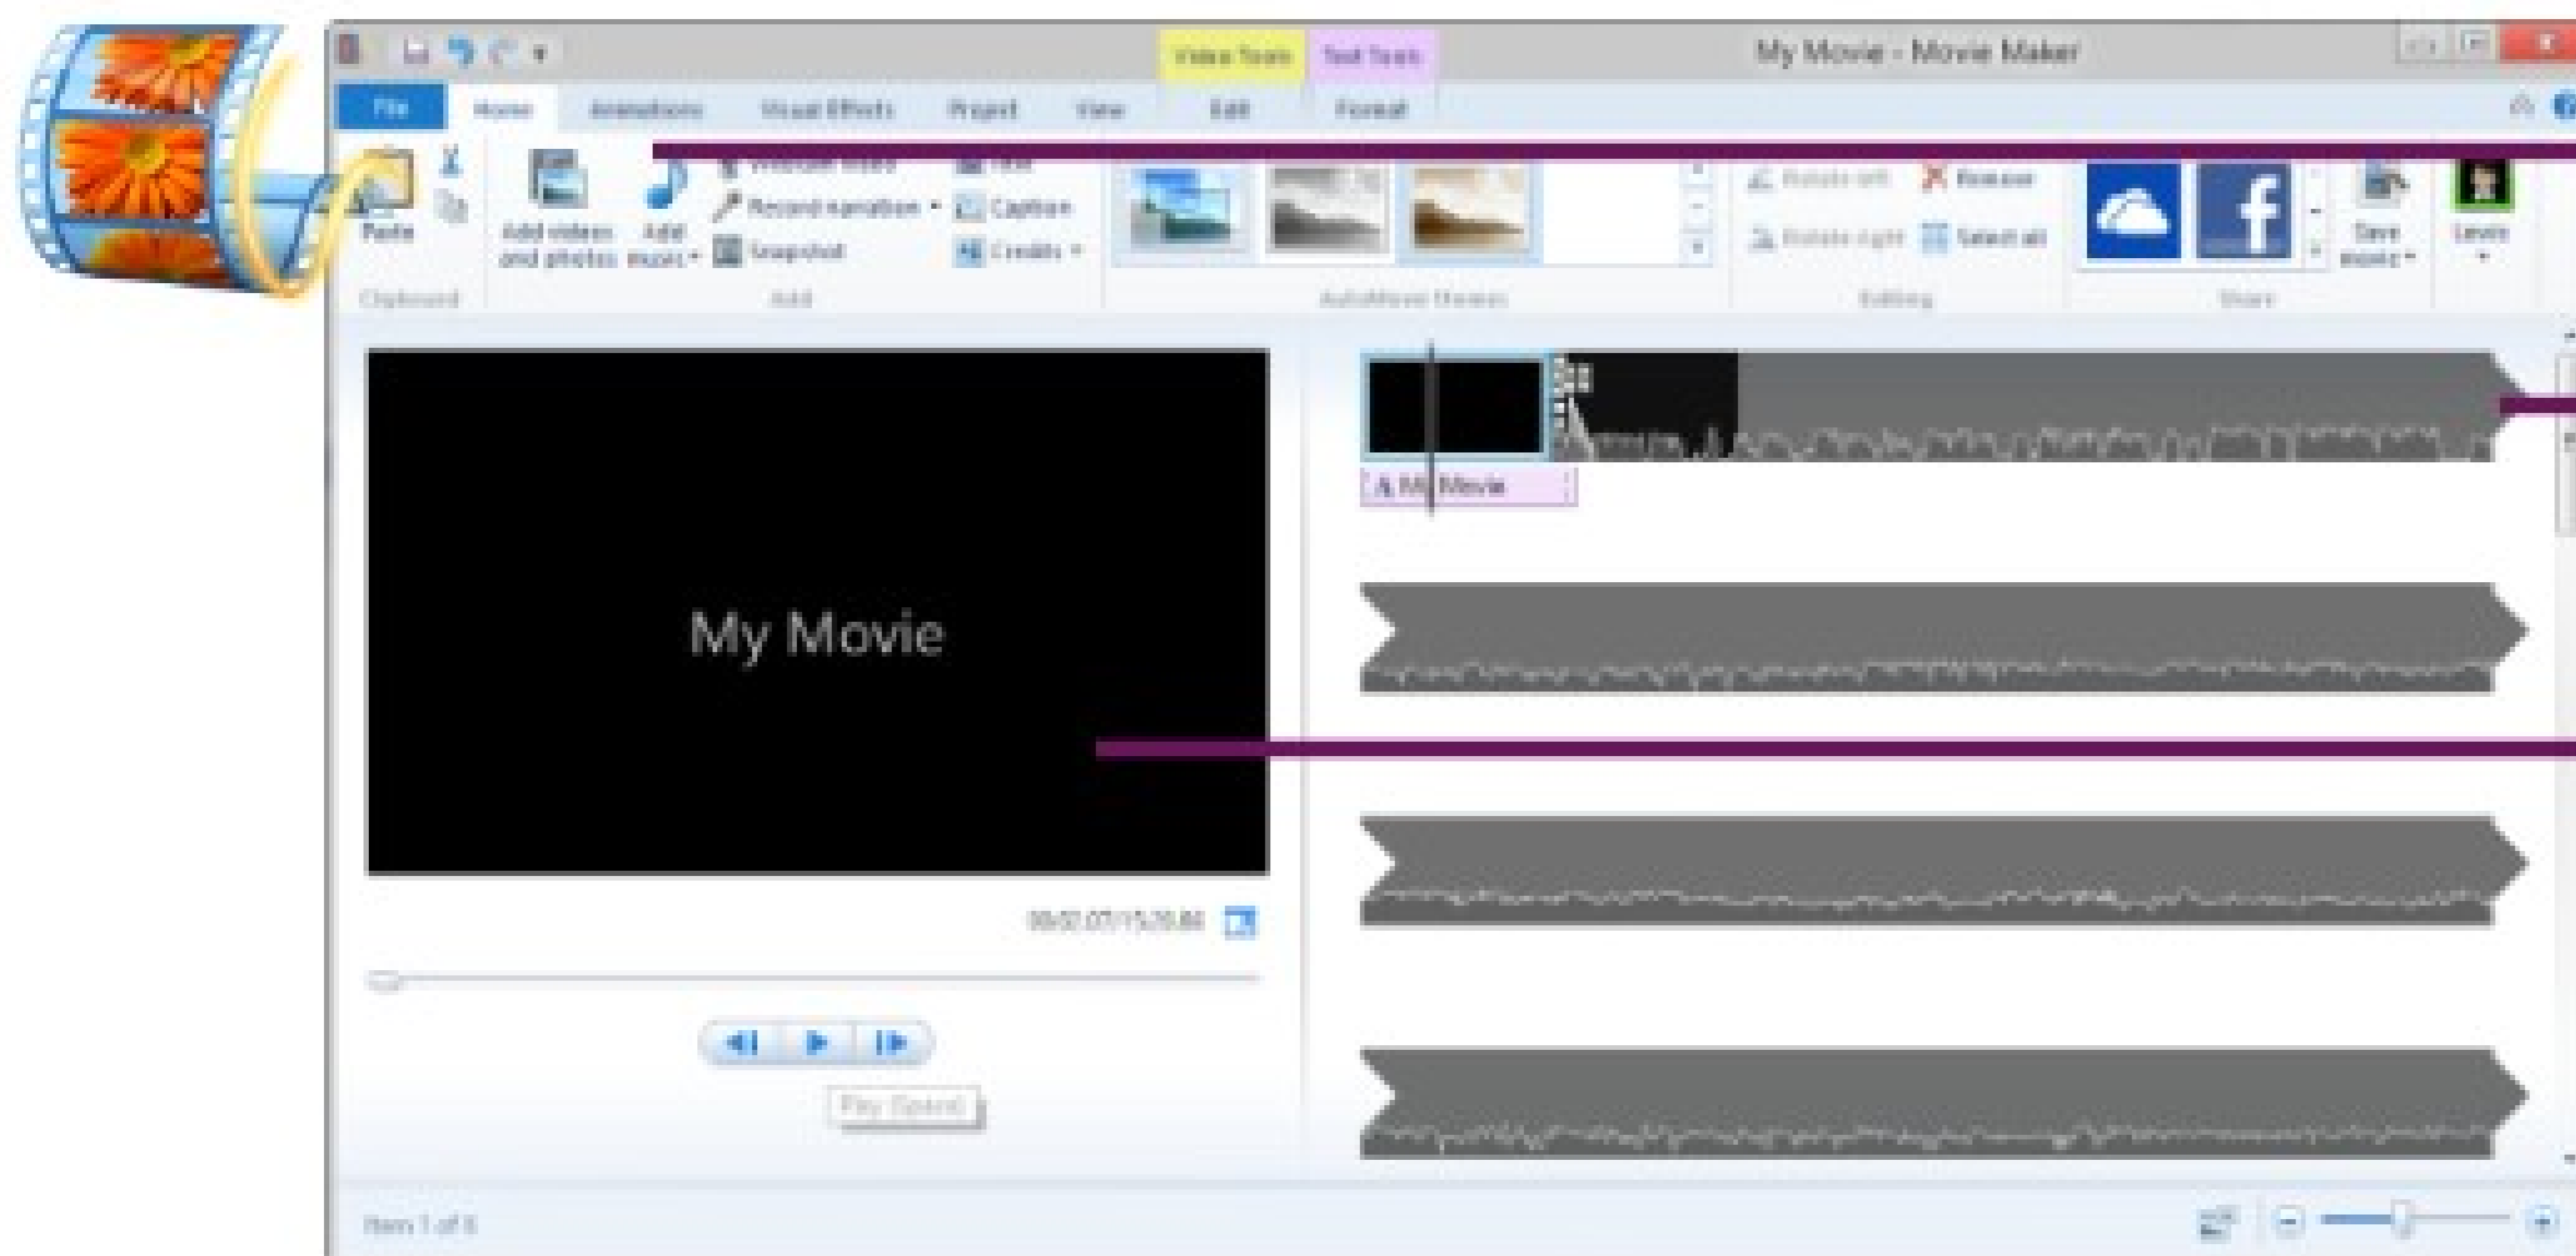

Finalize the video :

Save and export your video in the desired format (usually mp4).

Example

add videos, sounds and photos
